ADS
AQUA DATA STUDIO

One tool, one license, one interface.

Introducing our new Enterprise Ultimate

ADS Enterprise Ultimate combines the full Ultimate feature set with centralized licensing, enhanced activation controls, and direct access to our Product Managers and Solutions Engineers. It's designed for organizations that need to standardize database work across teams while maintaining control, security, and operational simplicity.

Why Database Teams Choose Enterprise Ultimate

Unlock the full Ultimate feature set automatically

Enterprise automatically upgrades your Standard licenses to Ultimate which comes with Task Scheduling for automated workflows, synthetic data generation for testing, and JSON import/export support for MongoDB.

Consolidate scattered individual licenses

Consolidate individual licenses into one enterprise key and one purchasing cycle: best fit if you're managing many separate license renewals across your team.

Boost your security

Boost your security by controlling where your licenses can activate: Enterprise keys can be bound to your corporate network (WAN IP whitelisting), so activation only works from inside your perimeter.

Increase access to our team

Enterprise customers get quarterly check-ins with our Product Managers and Solution Engineers to get best practices, learn what's upcoming on our roadmap, and make sure they get the most out of ADS.

Aqua Data Studio supports over 40 of the most popular data source platforms on Windows, macOS, and Linux.

ORACLE · IBM DB2 · Microsoft SQL Server · snowflake · MongoDB · MySQL · databricks
